Installing Textblob [Alternative]

If an apprentice is unable to install textBlob due to permissions or other errors, you can use Google Collab to install the package.

1) Open the following google collab notebook:
   https://colab.research.google.com/drive/1OVoFwZh0RWe9oThbVbQml8vnHpu7GmHS?usp=sharing

2) Make a copy to your drive. File > Save a copy in Drive.

3) Upload the 'yelp.csv' to the notebook. To do this:
   a) Click on the folder icon on the left-hand side.
   b) Click on the upload icon (The file with the up arrow).
   c) Navigate to the session files: "natural-language-processing\data".
   d) Upload the '**yelp.csv**' file.

4) As there is no data folder on google collab, we will need to change some code:
   a) Navigate to the **second** cell in the notebook.
   b) Find the line that reads: `path = r'./data/yelp.csv'`
   c) Change it to the following: `path = './yelp.csv'`

5) Scroll down to the section on Textblob and run all the above cells. (They may be hidden)
